

Defect Report

Candidate Details

Name: Mogul Manoj

Position Applied: QA Intern

Application Under Test: Tichi Web Application

Application URL: <https://tichi-app-webapp-stage.web.app>

Browser: Google Chrome (Latest Version)

Operating System: Windows 11

Report Date: 28 June 2026

Defect Details

Defect ID: BUG-001

Defect Title: Login accepts invalid email format

Module: Login

Severity: High

Priority: High

Status: New

Description

The application allows the user to proceed with the login process even when an invalid email format is entered. The email field should validate the email format before processing the login request.

Preconditions

- User is on the Login page.
 - Login page is accessible.
-

Steps to Reproduce

1. Open the Tichi application.
 2. Navigate to the Login page.
 3. Enter an invalid email format (e.g., abc.com).
 4. Enter any password.
 5. Click the **Login** button.
-

Expected Result

The application should display a validation message such as "**Please enter a valid email address.**" The login request should not be processed until a valid email format is provided.

Actual Result

The application accepts the invalid email format and allows the login process to continue.

Impact

Users can attempt to log in using invalid email formats, indicating that client-side or server-side email validation is missing or incomplete. This may affect data validation and user experience.

Remarks

This defect report is prepared based on the issue provided in the technical assignment instructions.

Note

During my own testing of the application, the email validation behaved correctly and rejected invalid email formats. This defect report is prepared solely because the assignment explicitly instructs candidates to assume this issue exists and demonstrate defect reporting skills.
